PROJECT TITLE /

REASON FOR INTERVENTION		PROJECT DESCRIPTION	INDICATORS	MEANS OF VERIFICATION	ASSUMPTIONS AND RISKS
LEVEL OF INTERVENTION	OVERALL OBJECTIVE	Overall objective (strategic, political, higher long-term goal) that the project should help to achieve and envisaged long-term improvement for the beneficiaries. <u>Wording:</u> "...helps to achieve..."	Which key indicators can be used to assess the achievement of the overall objective?	Which sources of information back up the indicators and explain their development?	Please leave empty
	PROJECT OBJECTIVE Specific objective/Outcome	Concrete objective (state) reached when the project's planned outcomes have been achieved, thus helping to reach the* overall objective. Concrete use of capacities/structures. The envisaged state must always be achieved during the project period. <u>Wording:</u> "...is being used / carried out", "...are able to..."	Indicators on the project-objective level describe the long-term changes for the beneficiaries achieved by the project. Which indicators help to answer the questions "Was the project objective achieved?" and "How does one know that the improvement was achieved and will last?"	Which sources of information are available and used to measure improvement compared with the starting situation?	Assumptions as regards external factors (outside the control of the project executing agency) that can influence whether the project can help to achieve the overall objective.
	EXPECTED RESULTS 1/OUTPUT	Concrete, measurable results (milestones, interim goals) that help to achieve the project objective. The matrix can be expanded as required to show several outcomes (and the activities/measures needed for them). <u>Wording:</u> "...is available / has been introduced." "...has been set up / carried out."	Which indicators show that, and to what extent, the outcomes/outputs have been reached? Indicators do not describe the measures, but rather collate their concrete measurable results as regards achieving the outcomes/outputs.	Which sources of information are used to measure to what extent the sub-goals have been achieved?	Assumptions as regards external factors outside the control of the project executing agency that can influence the project objective (during the planned schedule).
	ACTIVITIES / MEASURES 1	Action steps needed to achieve the planned outcomes.	<u>Resources</u> Human and material resources needed to carry out the activities <i>Resources and costs reflect the budget.</i>	<u>Costs</u> of the individual activities.	Which conditions that are difficult to control affect the feasibility of the planned activities that help to achieve the outcomes?
